

Alistairs World

Because all the principal characters in ALISTAIRS WORLD are fictitious the trilogy is really a novel, says the author Keith Hopwood. However he insists theres a lot of fact written into the story line.

At the heart of the story is a curious character named Alistair Tetley Wate who begins his colorful career as a young engineer in Africa and ends it 45 years later in South America. Influenced by his brilliant college professor, Alistair is convinced that all living things are subjected to the natural rhythms and symmetries of the Universe, governed by a set of fixed scientific laws determined some relatively short time after the first primordial explosion. Written mathematics and music are simply universal languages invented by humans millions of years later and provide indisputable proof that these laws exist. However Alistair discovers many of those humans that persist in defying the laws of nature are slowly driving the rest of the world towards mental instability and inevitable chaos. After developing a keen interest in applied mathematics and electronic engineering, he launches himself into the world on a dedicated mission To export British manufactured goods and services across the globe only to find that politicians and others are continually frustrating his efforts. Alistairs solution is to take time out when he feels the pressure is on by seeking a few hours of therapeutic activity, such as a conversation with a pretty girl; or a game of roulette; or a drink. It often provides the cure he is seeking, but on occasions his natural compassion for the underdog can lead to more troubles than he bargained for. Part one of the trilogy deals exclusively with Africa, Part two with the Middle East and the Pacific Rim; Part three (due to be completed in early 2006) covers Latin America as far south as Southern Chile and Buenos Aires.
