

A self-contained introduction to the field of computational methods of signal processing. Divided into four sections: an overview of vector-space techniques and how they apply to signal processing followed by signal recovery, adaptive signal processing and signal recognition. Includes computer codes for developing class projects in which students can examine the behavior of algorithms and devise their own applications project. A wealth of examples plus a diskette are also provided.

Diary of Gideon Welles, Secretary of the Navy Under Lincoln and Johnson with an Intro, The Cube Farm Handbook, Rumi Tomato: Autobiography of an Afghan Minister, Kids Keyboard Course: Book 2, Rising Up Again and Again, Program Design with Pseudocode, Bei Betfair Wetten Und Gewinnen Fur Dummies (German Edition),
