

Declarative query interfaces to Sensor Networks (SN) have become a commodity. These interfaces allow access to SN deployed for collecting data using relational queries. However, SN are not confined to data collection, but may track object movement, e.g., wildlife observation or traffic monitoring. While relational approaches are well suited for data collection, research on Moving Object Databases (MOD) has shown that relational operators are unsuitable to express information needs on object movement, i.e., spatio-temporal queries. Querying Moving Objects Detected by Sensor Networks studies declarative access to SN that track moving objects. The properties of SN present a straightforward application of MOD, e.g., node failures, limited detection ranges and accuracy which vary over time etc. Furthermore, point sets used to model MOD-entities like regions assume the availability of very accurate knowledge regarding the spatial extent of these entities, assuming such knowledge is unrealistic for most SN. This book is the first that defines a complete set of spatio-temporal operators for SN while taking into account their properties. Based on these operators, we systematically investigate how to derive query results from object detections by SN. Finally, process spatio-temporal queries are shown in SN efficiently, i.e., reducing the communication between nodes. The evaluation shows that the measures reduce communication by 45%-89%.

Epistolae Ho-Eliauae: the familiar letters, An English Girl In Japan (1906), From Village Boy to Global Citizen (Volume 2): The Travels of a Journalist: The Travels of a Journalist, Volume 2, Illustrations of genius, in some of its relations to culture and society, A Life and a Day in the Underworld, History of England from the Fall of Wolsey to the Defeat of the Spanish Armada, Testament (Composers orchestration, C minor): Vocal Score (French) [A8781], Piano Scales, Arpeggios & Broken Chords, Grade 2 (ABRSM Scales & Arpeggios) by ABRSM (3-Jul-2008) Sheet music, Turns About Town, The Memory Book,

Querying Moving Objects Detected by Sensor Networks - Springer Many sensor-network installations (SN) observe moving objects. For instance, scientists observe animal movement [14, 37, 43], or authorities monitor Moving Objects Detected by Sensor Networks, SpringerBriefs in Computer Science, DOI **Querying Moving Objects Detected by Sensor Networks Markus** ?Querying Moving Objects Detected by Sensor Networks (SpringerBriefs in Computer Science)-. ?Querying Moving Objects Detected by **SpringerBriefs in Computer Science: Querying Moving Objects** Contents.
