

Fallen Astronauts: Heroes Who Died Reaching for the Moon

Near the end of the Apollo 15 mission, David Scott and fellow moonwalker James Irwin conducted a secret ceremony unsanctioned by NASA: they placed on the lunar soil a small tin figurine called The Fallen Astronaut, along with a plaque bearing a list of names. This book enriches the saga of mankind's greatest scientific undertaking, Project Apollo, and conveys the human cost of the space race by telling the stories of those sixteen astronauts and cosmonauts who died reaching for the moon. Many people are aware of the Apollo launch pad disaster in which three men lost their lives, but few know of the other five fallen astronauts whose stories this book tells as well: among them, Ted Freeman and C.C. Williams, who died in the crashes of their -38 jets; the Gemini Twins, Charlie Bassett and Elliot See, killed when their jet slammed into the building where their Gemini capsule was undergoing final construction; and Ed Givens, whose fatal car crash has until now been obscured by rumors. The extraordinary lives and accomplishments of these and other fallen astronauts including eight Russian cosmonauts who lost their lives during training unfold here in intimate and compelling detail, supported by extensive interviews and archival material. Their stories return us to a stirring time in the history of our nation and remind us of the cost of fulfilling our dreams.
